

## DMMS ISO 12122-4:2017- Timber structures- Determination of characteristics values-Part 4: Engineered wood products

### Scope

This document gives methods of determination of characteristic values for a defined population of engineered wood products calculated from test values. This document presents methods for the determination of

- a) characteristic value of material properties, where the determined property is multiplied by a geometric parameter to give a component capacity or component stiffness, or
- b) characteristic value of component properties directly, where the determined property is a component capacity or component stiffness.

This document presents methods for determination of

- a) characteristic value of mean-based properties, and
- b) characteristic value of 5th percentile-based properties.
